AIRPORT/SECURITY FRIENDLY SAFETY FOOTWEAR

Wide Load "Stealth" uses state of the art technology to deliver a light weight airport/security friendly safety boot. The boot is "invisible" to x-ray/airport scanners with key components such as lace hardware, stability shank and toe cap all manufactured from non-metallic/composite materials.

Wide Load "Stealth" retains the same fit properties as the proven and tested Wide Load "Orthopaedic" range of safety boots and incorporates the widest profile non-metallic protective toe cap available in the market. The caps exceeds the AS/NZS Type I Standard for impact and compression resistance.
